

# PlanIT Green™

Save money. Save energy. Save the planet.

## End of Life

Do you have an IT asset disposal strategy? Is it legal, secure and environmentally friendly? Does it provide you with money which you can use towards the purchase of new equipment?

**Equipment disposal is a necessary part of day-to-day operations**, but electronic components are not biodegradable and thus pose environmental and health threats due the materials they contain: lead, cadmium, mercury, chromium and flame retardant. **How do you dispose of this waste in a legal, secure and responsible manner?**

### Recycle

- IMPRES Technology provides proper environmental disposal and recycling of IT assets in accordance with international, Federal, state and local regulations. We provide full documentation, reporting and indemnification certificates for a complete audit trail.

### Donate (securely)

- If you choose to donate your old equipment, you need to know that formatting the hard drive is not a secure method of data sanitization. IMPRES Technology will render all hard drive data inaccessible in accordance with Department of Defense Standard 5220.22M. IMPRES will reset all equipment to original manufacturer defaults for proper reuse, eliminating risk of compliance or license issues.

### Trade-Up

- Older IT equipment may represent a significant opportunity for additional revenue. IMPRES Technology will enable you to maximize the upside revenue opportunity from your IT assets while eliminating the potential risks and liabilities of incomplete data sanitization and improper environmental disposal.

**We make the entire process easy for you** by arranging for and managing all logistics including pick-up and shipping to our facility. We can also arrange for your equipment to be properly wrapped and packed. IMPRES will also provide confirmation of receipt of assets.

Eliminate hazardous waste by incorporating green solutions into your asset retirement program. You can make a difference: **PlanIt Green.**
